Liver/Gallbladder Cleanse

**Read all of instructions prior to performing*

Supplies:

Apple Juice – preferably organic – 5 days worth

**Note: Liquid Fruit Pectin can also be used in place of apple juice, if blood sugar is a concern. Mix 1 packet in 32oz of water and drink throughout the day – every day for 5 days*

4 tablespoons Epsom salts = ($MgSO_4 + 7H_2O$)

1 large fresh pink grapefruit (1/2-3/4 cup juice)

1/2 cup Olive Oil Extra Virgin

3 cups water or fresh grapefruit juice (you will need additional grapefruits)

1 straw

Pint jar with lid for shaking mixture

Optional:

Alka-seltzer gold for possible nausea

Begin your cleanse 5 days before your flush day. We recommend you flush on a day you can rest, such as Saturday, which would require you to begin your cleanse on the Monday prior. During these five days begin to reduce the frequency in which you are eating fatty foods. *Check with your doctor about any meds you may be taking to make sure that they will not prevent a successful flush*

Day 1: Begin drinking apple juice. As much as is comfortable, up to a liter. *The malic acid in the apple juice will soften the stones.*

Day 2: Continue drinking apple juice. As much as is comfortable, up to a liter.

Day 3: Continue drinking apple juice. As much as is comfortable, up to a liter.

Day 4: Continue drinking apple juice. As much as is comfortable, up to a liter.

Day 5: Prime Day

- Continue drinking apple juice.
- Eat a no-fat breakfast & lunch (ie., fruit, vegetables, etc. - no milk, butter, etc.). *This allows bile to build up & develop pressure in the liver, which will in turn result in more stones being pushed out.*
- **Do NOT eat after 2:00pm.** *Doing so can result in your feeling ill later.*
- Prepare Epsom Salt Mix: 4Tbs epsom salt + 3 cups of water/grapefruit juice. Separate into 4 servings – ¾ cup each. Refrigerate. *Note: This will not taste good. Be prepared.*
- Prepare Olive Oil Mix: ½ cup Olive oil + ½-¾ cup fresh grapefruit juice in jar with lid. Leave out at room temperature.

- 6:00pm – Drink first serving (¾ cup) of Epsom Salt Mix. *Note: Straw recommended.*
- 8:00pm – Drink second serving (¾ cup) of Epsom Salt Mix. *Note: It will be several hours since eating, but you will not be hungry. Get evening/bedtime chores done and use restroom if needed, so as not to interefere with the rest of the schedule. You want to avoid being late if at all possible. You will not have time to clean up after 10pm so do so now if you desire.*
- 10:00pm – Shake up Olive Oil Mix until water and drink within 5 minutes. *Note: Straw recommended.* **Lie down in bed immediately, preferably on your back, though you can also lie down on your right side. Proceed to go to sleep.** Try to keep still for at least 20 minutes. If you need, you can bend your right knee up to your chest and augment the process. There should be no pain, though you may feel stones travelling along the bile ducts. **Should you experience any nausea during the night – get up and immediately take the alka-seltzer gold in water, then return to bed*

Day 6: Flush Day

- ***Expect diarrhea through the morning.***
- Upon Waking (but no earlier than 6:00am) – Drink third serving (¾ cup) of Epsom Salt Mix. *Note: if you are experiencing any indigestion or nausea – wait until it is gone before drinking epsom salt.* You may return to bed.
- 2 Hours Later – Drink last serving (¾ cup) of Epsom Salt Mix. You may return to bed.
- 2 More Hours Later – you may eat, beginning with fruit juice.
- ½ an Hour Later – you may eat fruit
- 1 Hour Later – you may eat regular food, but keep it light
- By supper you should feel recovered.

Notes About the Cleanse:

– You can get an estimate of how many stones you pass by looking for green or tan stones that float on the water (they do this because of the cholesterol inside of them).

- It is suggested that you need to pass about 2000 stones before the liver is clean enough. You may repeat cleanses at two week intervals, but never cleanse when you are ill.
- The first cleanse may rid you of the stones for a few days, but as the stones from the rear travel forward, they may give you the same symptoms again.
- Sometimes the bile ducts are full of cholesterol crystals that did not form into round stones. They appear as a "chaff" floating on top of the toilet bowl water. It may be tan colored, harboring millions of tiny white crystals. Cleansing this chaff is just as important as purging stones.
- **It is recommended that you cleanse your liver twice a year.**
- An excerpt from "The Cure for All Diseases:

"This procedure contradicts many modern medical viewpoints. Gallstones are thought to be formed in the gallbladder, not the liver. They are though to be few, not thousands. They are not linked to pains other than gallbladder attacks. It is easy to understand why this thought: by the time you have acute pain attacks, some stones are in the gallbladder, are big enough and sufficiently calcified to see on X-ray, and have caused inflammation there. When the gallbladder is removed the acute attacks are gone, but the

bursitis and other pains and digestive problems remain. The truth is self-evident. People who have had their gallbladder removed surgically still get plenty of green, bile coated stones, and anyone who cares to dissect their stones can see that the concentric circles and crystals of cholesterol match textbook pictures of "gallstones" exactly.

"Editors note: I started passing chaff through normal bowel movements after my 4th colon cleansing fast, approximately after a total of 4x14= 56 days of total colon cleansing within 9 months. The chaff continued in normal bowel move ments for 8 months! Thousands of tiny stones, looked like small popcorn and small bee pollen granules, others looked like moth wings. Sometime I would drop at one bowel movement 50-100 pea size stones that would float in the water. It was truly an experience. Almost daily for 8 months! "
